Opis produktu

Milansport Aero Disc for 1/12 Hot Race tires

It was not a easy project to make. We tested different designs, materials and thickness. In the end we found what we been looking for.

The discs are made out of 0,5mm carbon, designed to fit the front rims with bearing, without any play between the spikes of the rim and rear disc are mounted with wheels mounting holes (please notice that this mounting makes the rear by 1mm wider).

After a long time testing on different tracks in different classes drivers notice:

- more stable car
- more on-power steering
- less air resistance
