## Opis produktu

MR33 Clamp Servo Horn 25T 2-Hole 19/15mm - Black

The MR33 aluminum servo horn has 2 different holes for mounting the linkage rod. The holes are available in the height 15 and 19mm and thus allow different settings on the vehicle. The servo horn has 25 teeth and is suitable for servos such as Futaba, Savöx, Power HD, Muchmore and Highest. The servo horn is screwed as gewhont from the front of the servo. To eliminate unwanted play, a second screw is used laterally! Of course, the servo horn is held in the MR33 look!
