## Opis produktu

Milansport is happy to present the Rubber Bumper for XPRESS XQ10F cars!

The Milansport Rubber Bumper is 3d printed from high quality flexible material. After many prototypes and designs I decided to stick with the honeycomb/hex theme. This had the best results in flexibility and absorbing hits.

Bumper have 25g weight and 14mm height (the same height as in the standard foam bumper). The bumper is bigger in size from the kit foam one and got the extra space for the front weight, it provides better support for the bodyshell as well with the extra 25g in front you get better handling of the car.

The biggest advantages of the bumper compare to the foam bumper:

- absorbs better hits and does not transfer it into the car
- keeps the shape after any crash
- stays flat compare to foam bumper that have the tendency to deform

---

The Milansport Rubber Bumpers got the MS logo in front as proof of authenticity.
