Opis produktu

CNC-machined rear pod lower plate made from 2.0mm premium-grade aluminum material. Alu Rear Pod Lower Plate features pod mounting positions for the standard rearward mounting position where the center pivot is located in-line with the side link pivot balls on the rear pod plate, and the forward location that places the pivot 2mm forward of the link mounting points. This adjustment has a significant effect on the cornering feel:

Forward - gives a good balance between front and rear traction, and is well suited for most conditions.

Rearward - gives the most steering, and most free rear end, especially suited for high grip carpet.

Rear POD edges are beveled, for less resistance to the ground during cornering.
