## Opis produktu

**Redesigned CNC-machined graphite bumper holder improves aerodynamics (mainly of lightweight body shells) as it prevents the front lip of the body from folding down at high speeds, and gives the body better protection in hard crashes. It keeps the front body posts at the same positions as previous versions, but rather atop the chassis so it does not touch the racing surface; this improves steering and prevents front scrubbing.**

**Machined from premium 2.5mm graphite, the holder is rigid enough to withstand serious crashes.**
